

IN THE SPECIFICATION

Please replace the 2nd full paragraph on Page 5 of the Specification as originally filed with the following:

Figure 2 depicts an exemplary load sleeve 14, wherein the bottom portion of load sleeve 14 comprises a section that joins the top portion of load sleeve 14 such that load sleeve 14 envelops main structural member 1. Load sleeve 14 further comprises a pipe 18 disposed perpendicularly to the main axis of structural member 1. Pipe 18 may be used to support loads with typical yoke mounting configurations, allowing an axle to pass through pipe 18. The axle may be, and preferably is, a bolt secured by a nut. Load sleeve 14 is particularly well adapted for loads that are required to rotate over a modest angular range about a horizontal axis through pipe 18.
